Looking to the future of the PhD: EUA Doctoral Week focuses on global trends, funding and quality

More than 200 delegates from over 30 countries are due to gather later this month (23-27 September) for EUA Doctoral Week that will be hosted by the Swedish medical university, Karolinska Institutet, in Stockholm, Sweden. The week comprises three separate but connected international events that will provide different higher education and research stakeholders with an opportunity to engage with three highly relevant issues for doctoral education: global trends, funding and quality assurance.

The first event will be the Final Conference (23-25 September) of the EUA-led project called CODOC which has been investigating international trends in doctoral education across East Asia, Latin America, Southern Africa and Europe. The findings that will be presented in a new report will include an overview of these trends, how universities are building collaborations (within and between the different continents) and university expectations for future developments in doctoral education. Speakers and participants from across the world will discuss the project findings.

The EUA Council for Doctoral Education Annual Meeting (25-26 September), the second event of Doctoral Week, will focus on the funding of doctoral education. It will examine different models of investment in doctoral education, the interplay between excellence and capacity building, and explore the costing of doctoral schools and programmes within universities. There will be case studies of managing external funding, national funding systems and co-funding doctoral programmes with partners from the private sector. The meeting will aim to provide a platform for dialogue between universities, funding organisations and other stakeholders.

The final event of Doctoral Week will look at quality management in doctoral education. The Accountable Research Environments for Doctoral Education (ARDE) Workshop (26-27 September) is part of an EUA-coordinated project on quality management in doctoral education. The workshop will be a platform to share good practice and to formulate recommendations on how to ensure transparency and accountability in doctoral schools and programmes.

Notes to editors

Both the CODOC and ARDE projects are supported by funding from the European Commission.

The European University Association (EUA), as the representative organisation of both the European universities and the national rectors' conferences, is the main voice of the higher education community in Europe. EUA's mission is to promote the development of a coherent system of European higher education and research. www.eua.be

The mission of the EUA Council for Doctoral Education (EUA-CDE), an integral part of the European University Association, is to contribute to the development, advancement and improvement of doctoral education and research training in Europe. www.eua.be/cde

[Karolinska Institutet](http://www.ki.se) is one of the world's leading medical universities. It accounts for over 40 per cent of the medical academic research conducted in Sweden and offers the country's broadest range of education in medicine and health sciences. Since 1901 the Nobel Assembly at Karolinska Institutet has selected the Nobel laureates in Physiology or Medicine.
